AUTOMATIC VOLUMETRIC FILLING MACHINES

DV Series volumetric liquid filling machines are fully automatic systems with extremely easy and reliable operation. They can be operated with a wide range of filling capacities, bottle types and liquids. They are available as a single unit, as well as a complete line with Arsanmak capping and labelling machines.

DV Series volumetric liquid filling machines can be operated efficiently and economically without need for highly skilled operators thanks to their ergonomic design and automation; operation and maintenance are very easy.

Technical Features

- 2–12 nozzles
- 500–5,000 ml filling capacity
- Adjustable filling speed (max 60 bottles/min)
- AISI 316 parts in touch with the liquid
- Touch screen microprocessor control
- Wide range of liquid products (fluid, semi-fluid)
- Optional product inlet filter
