The man-machine engineering

The machine good use of ergonomics design concept, reducing operator fatigue strength from multiaspect, improving the ride comfort of operators, which embody the people-oriented design concept.

300 mm in the use of small diameter of the wheel, which greatly reducing the left arm fatigue strength,

The larger space design, which reducing the homework to legs constraints; Using low, wide, getting on the vehicle pedal design is convenient for operation personnel and vehicles.

High elastic rubber tires,steering axle, Suspension bridge,high elastic suspension seat, such as multiple damping effect, which ensure the driver comfort from all directions.

lowing torque hydraulic steering gear steering precision, small resistance, no hydraulic recoil, increasing operator comfort, more suitable for operation personnel for a long time.

Steering wheel Angle is adjustable up to 15 degrees, seat before and after the 150 mm mobile distance, adjustable backrest 45 degrees, the operator to adjust according to need, which is suitable for people of all shapes and sizes.

Wide view mast and overhead guard ensure operators have excellent vision.

EFFICIENCY · ENERGY CONSERVATION

Multi-function meter moment shows all information and operation, in perfect condition operation personnel in a timely manner to the whole vehicle information have a detailed understanding.

Vehicle configuration button emergency switch, which avoids emergency security problems.

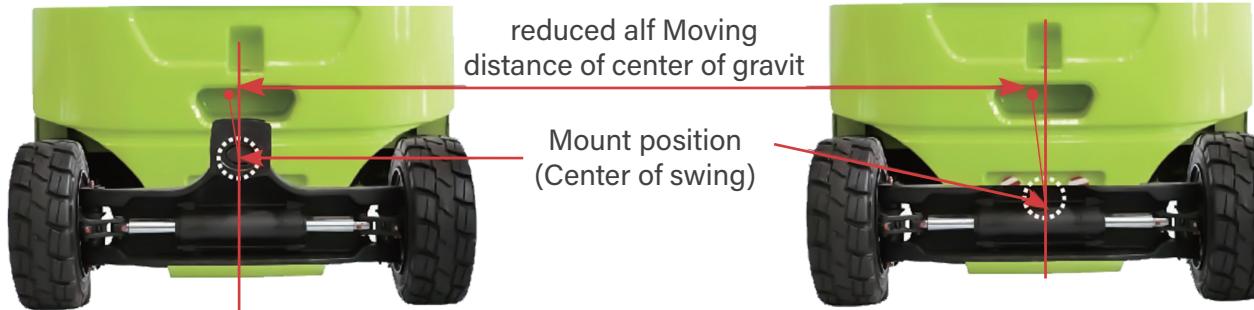

The right operation handle can be relaxed, safe vehicle operation, at the same time reduce the fatigue strength in her right arm.

High standard configuration safety seat for the operator more comfortable and more comfortable working environment, even if he long time operation will not feel tired.

Security stabilization

The vehicle design always is the basic of higher security and higher stability, every detail is to improve the stability of the vehicle, or to improve the vehicle's safety coefficient.

High pivot steering axle design, narrow the distance between steering and vehicle center of gravity, which reduce the oscillation amplitude when turning body, and achieve higher vehicle stability

Vehicle used for turning speed control system in high speed turning automatically reduce the speed, avoiding because of the high speed turning the vehicle rollover accident, which achieving more excellent stability.

Hydraulic and electrical parts are set the overload protection to eliminate unsafe factors in the use of.

Vehicle design center of gravity low, increasing vehicle wheel track and wheelbase, which not only greatly improving the stability of the vehicle, but also improving residual loading capacity of vehicles.

Operators in the perceptual system, which completely avoid the driver is not in the vehicle and unsafe accidents occur when wrong operation.

Double drive and steering Angle relationship between precise calculation, using the electronic automatic differential each round of pure rolling operation, which is to avoid due to the differential problems of power consumption and tyre wear.

High efficiency environmental protection * energy saving

High efficiency, environmental protection, energy saving is the guiding ideology of vehicle design, every effort along the guiding ideology for divergent thinking.

- ◆ Drive motor rating adopts a new generation of high efficiency three-phase ac motor, with high speed, good acceleration and reliable driving performance and gradeability greatly improve production efficiency and productivity
- ◆ Lift motor rating also uses a new generation of high efficiency three-phase ac motor, gear pump with high efficiency low noise, as well as lifting, lowering high speed setting, which greatly improving the working efficiency.
- ◆ Design of 720 ah large capacity battery, which avoid the shift of midway replacement batter.
- ◆ Adopts gear pump with high efficiency double modulus low noise and high precision gear reducer, the vehicle noise below 65 decibels.
- ◆ Whole vehicle which is using high efficiency and energy saving LED lamps and lanterns, collection of long life, high efficiency and energy saving and a series of advantages
- ◆ When stopping acceleration, and the reversing driving, braking and ramps the start of regenerative braking functions, make the battery recycling energy, extend battery life. At the same time reduce the wear of mechanical friction plate, reduce maintenance costs more effectively.

Intelligent Control

Whole vehicle intelligent control is to realize the man-machine engineering vehicles, security, stability, high efficiency, environmental protection and energy saving.

Various operation modes are to choose suitable for different conditions.

Accurate calculation of control is to ensure the vehicle stability.

Compact size of the ac drive motor and the perfect combination of efficient frequency converter.

Large size LED LCD control panel state real-time monitoring vehicles

Added a number of optional features, implemented a number of speed control, operation control, function display, etc.

Timing charging function, is to avoid the peak, letting use cost is lower.

Intelligent Control

Maintenance free, easy to maintenance cost greatly reducing vehicle use, which is truly satisfy customer finally.

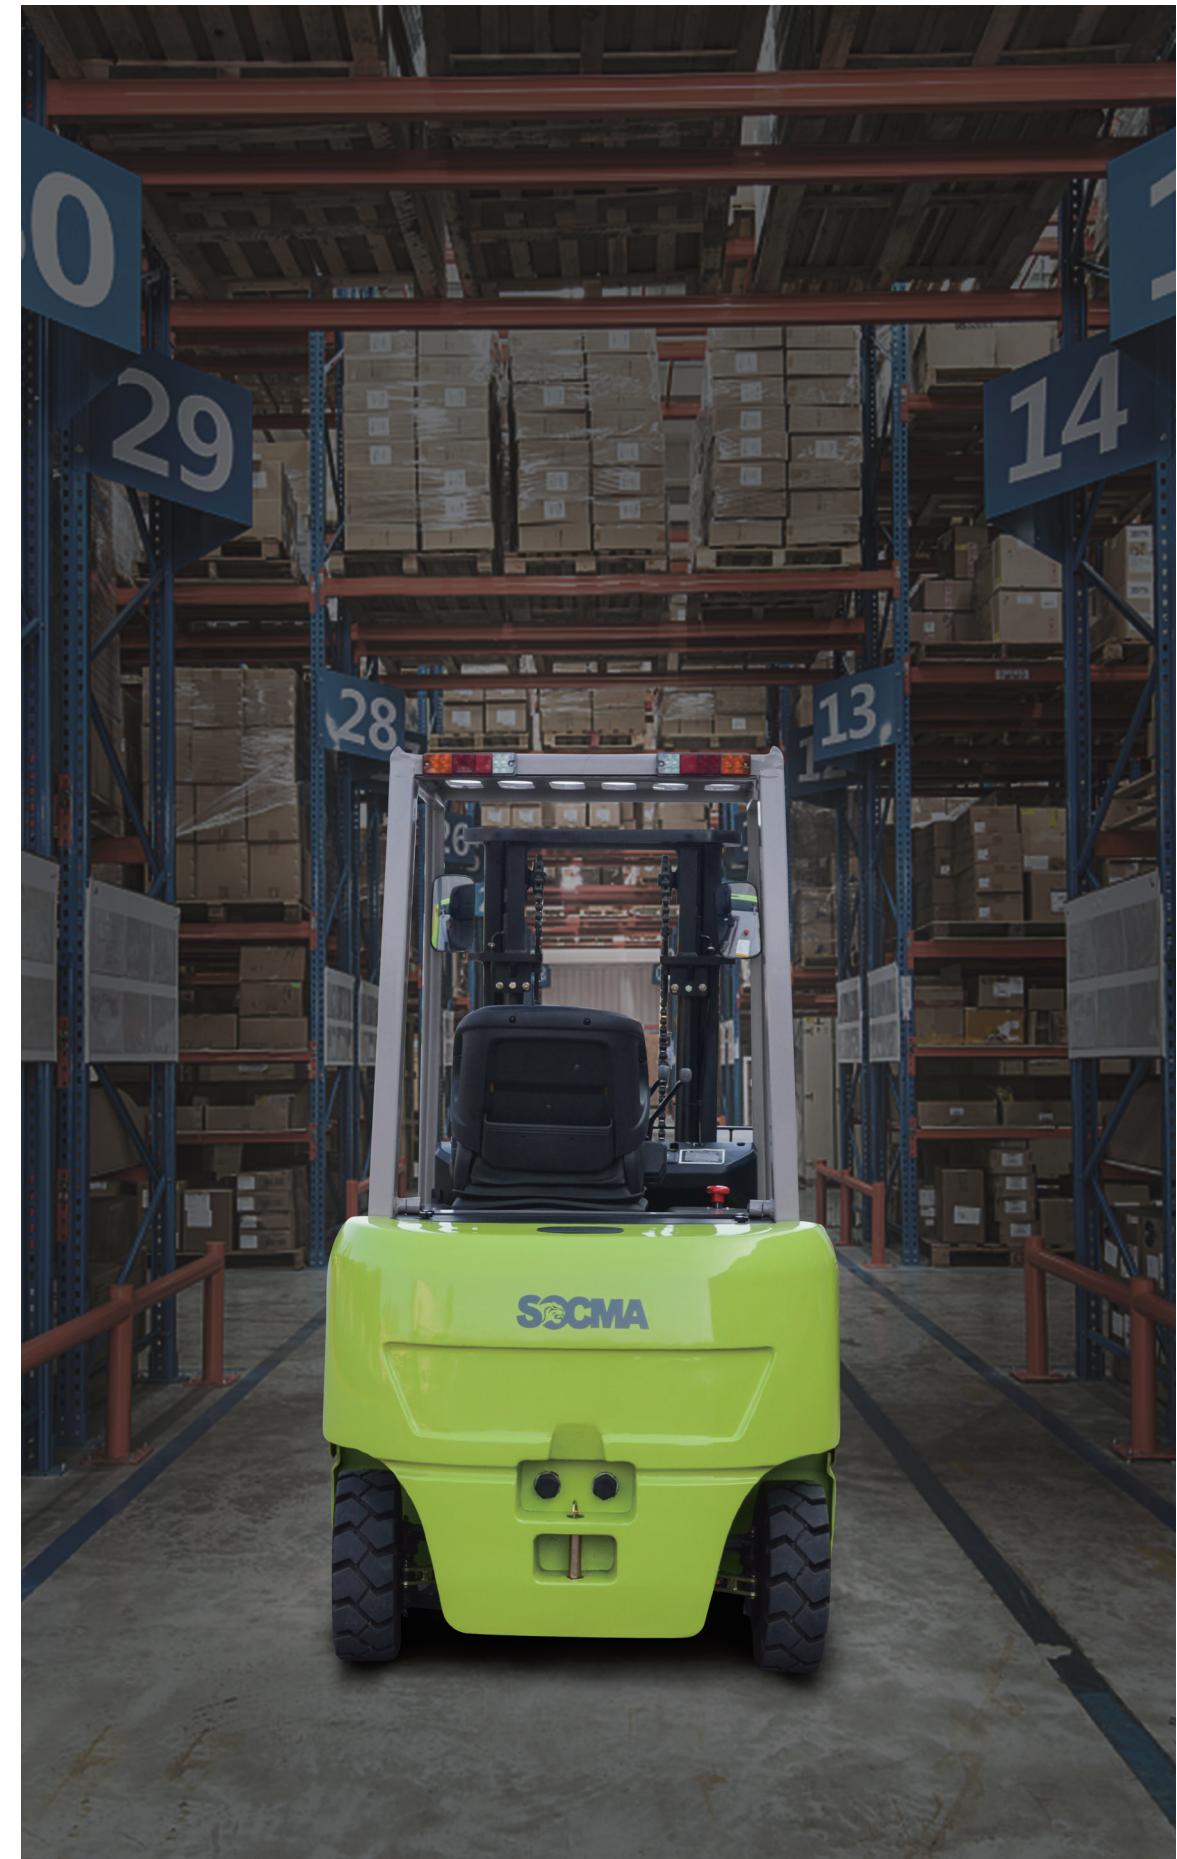

- ◆ Fully enclosed wet-type brake disc, which is more truly no wear and tear
- ◆ Whole vehicle maintenance free three-phase ac motor, high protection grade, no parts, which reduce the cost of maintenance.
- ◆ CAN bus control technology is to achieve reliable data transmission and fault diagnosis.

● COUNTER BALANCE FORKLIFT SPECIFICATIONS

	Model	FB15T	FB20T	FB25T	FB30T	FB35T
Characteristic	Rated lifting weight	1500kg	2000kg	2500kg	3000kg	3000kg
	Load center distance	500mm	500mm	500mm	500mm	500mm
	Overhang	340mm	300mm	300mm	350mm	350mm
	Front overhang	434mm	465mm	465mm	465mm	465mm
	wheelbase	1400mm	1500mm	1500mm	1700mm	1700mm
	Total weight (with battery)	3380kg	3920kg	3080kg	4940kg	5100kg
	Total length (To vertical surface of fork)	2174mm	2265mm	2265mm	2485mm	2485mm
	Total width	1080mm	1170mm	1170mm	1240mm	1240mm
	Height of overhead guard	2027mm	2085mm	2085mm	2120mm	2120mm
	Standard mast height that does not rise	1990mm	1990mm	1990mm	2050mm	2010mm
Size	Standard mast Maximum stretch height	4060mm	4060mm	4060mm	4080mm	4080mm
	Standard mast inclination (Lean forward/Reclining)	6/9deg	6/9deg	6/9deg	6/9deg	6/9deg
	Ground clearance of frame	115mm	115mm	115mm	120mm	130/128mm
	Ground clearance of standard mast	100mm	100mm	100mm	120mm	110/95mm
	Standard mast Free lifting height	120mm	125mm	125mm	140mm	140mm
	Turning radius (Smallest outside)	1900mm	1065mm	2065mm	2230mm	2230mm
	Maximum fork height (Rated lifting weight)	3000mm	3000mm	3000mm	3300mm	3300mm
	Minimum theoretical width of right-angle channel	2065mm	2065mm	2065mm	2340mm	2340mm
	Minimum theoretical width of right-angle stacking channel	3330mm	3530mm	3530mm	3280mm	4280mm
	The smallest x The largest	100x1040mm	240x1040mm	100x1040mm	250x1100mm	250x1100mm
