

AUTOMATED TMR FEEDING CENTER

Save money with automatic feeding systems (AFS)

Automatic feeding systems allow for the increase in frequency of feed distribution with significant advantages in terms of health and production.

Main advantages of TMR feed centers are benefits of frequent feeding, more accurate mixes, higher milk production and higher fertility of cattle, savings on working hours, less labour requirement.

Balanced ration with a accurate feed management

Main criteria in the feeding processes in farms is the operation of preparing the feed ration every day with the same quality and distributing it to farm animals at the exact time. Feeding automation and easy management of feeding process is becoming progressively important in modern dairy farms for productivity of the cows.

Starmax can design a complete feed facility by combining a feed mill system with tmr feed center considering the client's need.
