SL-JC-WALL

The SL-JC-WALL model, which is mounted on the wall, is offered with 500 kg and 1000 kg carrying capacity options. Parameter A can be determined flexibly to best suit your needs and projects. The SL-JC-WALL model can be securely fixed to the wall using anchor material via the ties located on the joint plate. It is designed to offer a wide working area with the capacity of the compass to rotate up to 180 degrees.

Thanks to the trolley mechanism integrated into the jib arm, air can be easily delivered to any point where you need pneumatic systems. This design helps you save time and energy by increasing operational efficiency. Depending on the attachment you will use, you can choose a single-way or double-way configuration in the SL-JC-WALL model.
